

Implement a method to insert an element at its bottom without using any other data structure.

```
def insertAtBottom(arr,item):  
    if not len(arr):  
        arr.append(item)  
    else:  
        temp = arr.pop()  
        insertAtBottom(arr,item)  
        arr.append(temp)
```

just a usual case. It is subroutine of revering the stack
