## **Print Permutations**

```
def permutations(string):
    res = []
    permuteUtil(string, res, '')
    return res

def permuteUtil(string, res, ssf):
    if len(string) == 0:
        res.append(ssf)
        return

for i in range(len(string)):
        ch = string[i]
        ros = string[:i]+string[i+1:]
        permuteUtil(ros, res, ch+ssf)

string = 'abc'
print(permutations(string))
```
